Introduction

In Figures

In between 2011 to 2021, the number of people using the internet has increased by more than 4 billion users, by the minute. The number of people using social media has increased by more than 1 billion users in the same time period. Which means, the number of people who are connected to the internet, but not connected to social media is decreasing. Which means, the number of people who are connected to the internet, but not connected to social media is decreasing.

Brainstorming

Why this topic?

Digital Native Culture

As part of a predominantly millennial workforce, I've been observing a trend for some time now, which is to maximize the time we spend on social media platforms. Which is why I'm interested in exploring ways to improve our overall relationship with social media.

Curated Content Feed
Content that is curated based on your interests, and is presented in a way that is easy to consume.

Personal Threads
Ability to create personal threads, and share them with your friends and family.

Search & Discovery
Ability to search for content, and discover new content that is relevant to you.

Why new-age intelligence is crucial?

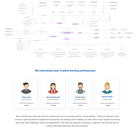
Despite the unprecedented rise in information and technology, we are still struggling to make sense of the world around us. Professionals in both white and blue-collar jobs are struggling to keep up with the pace of change, and are feeling overwhelmed and anxious as a result.

Existing Aware Intelligence

In addition to existing behavioral control, we also considered mindset control, and emotional control while creating the solutions. By doing so, we were able to create a more holistic solution that addresses the root cause of the problem, rather than just the symptoms.

Mind Map

As part of understanding and defining the first principles of problem that we want to solve, we decided on exploring the mind with a mind map. We started with the central idea of 'Mind', and then explored the various aspects that are related to it.



We interviewed over 4 hybrid working professionals.

We conducted user interviews with our professionals who are currently working in a hybrid setup. The interviews were conducted to understand their current work-life balance, and to identify any pain points that they are facing in their current setup.

Questions

Overall Insights

Potential Problem Areas

Based on the research and insights we've collected, we've identified a few potential problem areas that we could address. These problem areas are not exhaustive, but they are the ones that we think are the most relevant and important to the users. We've also identified a few potential opportunity areas that could help us address these problem areas and create a significant impact on the users' lives.

Significance and Relevance

Future Relevance - As we move into the future, the world around us will continue to change at an ever-increasing pace. Which is why it is important for us to be aware of the changes that are happening around us, and to be able to adapt to them. This is why we believe that this problem area is relevant and significant for the future. Because it will help us to be more aware of the changes that are happening around us, and to be able to adapt to them.

Social Relevance - The problem area that we've identified is also relevant and significant for the present. Because it will help us to be more aware of the changes that are happening around us, and to be able to adapt to them. This is why we believe that this problem area is relevant and significant for the present.

Personal Relevance - The problem area that we've identified is also relevant and significant for us personally. Because it will help us to be more aware of the changes that are happening around us, and to be able to adapt to them. This is why we believe that this problem area is relevant and significant for us personally.

The Golden Priority Matrix

We have narrowed down the problem area to the following, which we believe is the most significant and relevant for the future, present, and personal.

Ideation

Mindmap

Mind Flow

Before the Day Begins - The journey starts when the user wakes up and identifies high-intensity periods with real-time input tracking. It also includes setting up the day's schedule and goals.

During the Day - The user receives real-time notifications and alerts to help them stay on track with their schedule and goals. It also includes tracking their progress and making adjustments as needed.

After the Day Ends - The journey ends when the user reviews their day and reflects on their productivity. It also includes setting up the next day's schedule and goals.

Flowchart

Value Proposition

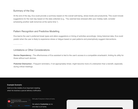
Value Proposition - The value proposition is a statement that clearly identifies the benefits that a product or service will deliver to its customers. It should be concise, compelling, and differentiate the product or service from its competitors.

Value Proposition Canvas - The value proposition canvas is a tool that helps you to create a value proposition that is customer-centric. It helps you to understand your customer's jobs, pains, and gains, and then design a value proposition that addresses them.

Types of Micro-Based Suggestions

Personal Growth & Objects

Adaptive Focus Mode (Notifications)



Summary of the Day

Summary of the Day - The summary is a feature that helps you to see what you've been up to throughout the day. It helps you to reflect on your day, and to see how you've been spending your time.

Pattern Recognition and Predictive Modeling - Pattern recognition and predictive modeling are two important concepts in machine learning. They are used to identify patterns in data, and to make predictions about future events.

Conclusion & Other Considerations

Product Responsibility - The information that is collected from the user's sensors is a considerable responsibility. Making sure that the data is secure, and that it is used only for the purposes that it was collected for, is very important.

Prioritization

Storyboarding

Storyboarding 2

Storyboarding 3

Product Vision Statement

Product Vision Statement - The product vision statement is a statement that describes the long-term goal of a product. It should be concise, compelling, and inspire the team to work towards a common goal.

Appendix

Acquired New Mindset

Throughout the course of this project, I've had the opportunity to work with a number of different tools, including Figma, Miro, Adobe XD, Photoshop, Illustrator, and Premiere Pro. As a result, I've developed a strong mindset around how to use these tools effectively to create high-quality designs and prototypes. I've also learned how to collaborate with other designers and developers to bring my designs to life.

Future Scope

Future Scope - The future scope is a statement that describes the long-term goal of a product. It should be concise, compelling, and inspire the team to work towards a common goal.

Success, up Certificate
